Fig.13

The graph displays a probability distribution for the number of nodes. The x-axis is labeled from 30 to 90 in increments of 10. The y-axis is labeled from 0 to 4 in increments of 0.5. The curve starts at a low probability of about 0.2 at 30 nodes, remains relatively flat until 40 nodes, then rises sharply to a peak of approximately 3.4 at 65 nodes. After the peak, it falls sharply to about 0.1 at 70 nodes, then shows a small secondary peak of about 0.5 at 85 nodes before returning to near zero at 90 nodes.
